

# Health and Safety Support

## Developing and implementing effective and impactful health and safety solutions.

**Health, Safety, Security, and Environment (HSSE)** is a core value and the cornerstone of GES culture. We are dedicated to safeguarding people, property, and the environment. GES' HSSE program has been refined and improved over many years of experience in the field. We provide the tools, training, and culture that allow our teams to execute work safely and intervene or stop work when necessary.

GES' comprehensive programs for HSSE and Quality are based on the principles of the Loss Prevention System™ (LPS) behavior based management system. We communicate a consistent philosophy that we can never be complacent about safety or quality. Using LPS tools, we also evaluate the quality of our work, and track, report, and develop root cause analyses. Under this program, GES has conducted its field operations with no Occupational Safety and Health Administration (OSHA) lost-time incidents in more than 15 years.

The policies and processes embodied in our HSSE program are the foundation of our Health and Safety Support services. GES offers a range of services to empower clients to proactively manage health and safety in the workplace. Our team of health and safety specialists build custom solutions focused on injury prevention, regulatory compliance, meeting client safety requirements, and a positive safety culture. GES will align with your business objectives to achieve your HSSE short-term needs and long-term goals.

### Service Capabilities

Training (OSHA, DOT, RCRA, LPS, Safe Driver)

HSSE compliance monitoring and enforcement

Security planning/management

HSSE audits and inspections

Onsite HSSE oversight/support

Rapid response services (non-routine and emergency needs)

Pandemic response and preparedness

Return to work/reoccupancy planning

Air monitoring and sampling/  
industrial hygiene support

OSHA recordkeeping support

Development of:

- HSSE program and procedures
- Training programs
- JSA/JLA/JHA/AHAs
- Health and safety plans
- Incident investigation process
- Client and task specific inspection checklists
